

ARC Solar Project

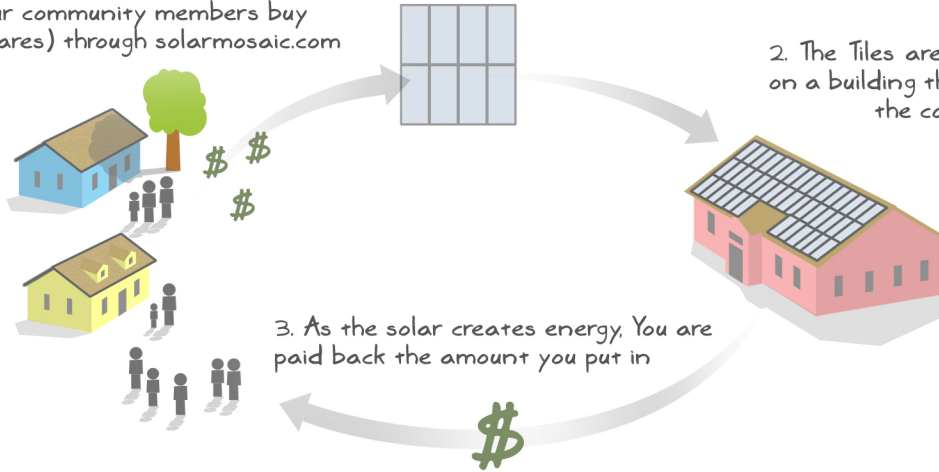

Together we can all go solar!

The Asian Resource Center is pioneering a new model of creating solar energy and you can be a part of it! Together with Solar Mosaic and the Ella Baker Center for Human Rights, the ARC is making it possible for community members like you to invest in a \$100 share (called a Tile) of the solar installation on the ARC's roof. As the solar panels create energy, your shares will help the ARC save over \$100,000 in electricity costs, prevent nearly one million pounds of CO2 pollution from entering our atmosphere, and create over 500 local job hours. Plus, you'll get paid back the amount you put in! Get your solar shares in the ARC project at solarmosaic.com/arc

How Community Solar works:

1. You and your community members buy solar Tiles (shares) through solarmosaic.com

2. The Tiles are installed on a building that serves the community

3. As the solar creates energy, You are paid back the amount you put in

Invest in Your Community:

The organizations that make up the ARC have long been community leaders in affordable housing, health care, environmental justice, and many other social issues. This solar project offers ARC the chance to lead once again and show that it is possible for low-income communities and communities of color to reap the benefits of clean energy. Through the investments of community members like you, ARC will lead the way for other solar installations that will create jobs and clean power across Oakland.

Total Project Stats:

System Size:	28.8 kilowatts
20-year cost savings:	\$112,684
Number of Tiles to be sold:	965 Tiles
Pounds of carbon avoided:	835,326 lbs
Annual electricity production:	35,280 kilowatt hours (in year 1)
Local job hours created	576

What You Can Create:

Investing in a \$100 share ("Tile") in the ARC project makes a big impact for the ARC, the environment, and for the local economy. For each Tile that you purchase, you:

- create over 50 watts of beautiful solar energy
- help the ARC save over \$300 on its utility bills
- keep 900 lbs of carbon from entering the atmosphere

Getting Paid Back:

After you and all your friends purchase Tiles in the ARC solar project, a 28.8 kilowatt solar power system will be installed on the building. The ARC will then begin making monthly payments for the electricity generated by the solar installation. These monthly payments will be less expensive than what ARC was previously paying for its power from the utility. The ARC will save on its electricity bills, and its monthly payments will go to pay you and the other people who purchased Tiles in the project, the amount you put in.

Get your solar shares (Tiles) online at solarmosaic.com/arc
